Notes.

- 1. Adjust the system volume either through DRC pre-gain (DRC on) or mixer gain (DRC off).
- 2. Direct control of DAC digital volume is NOT recommended.

2. Pin Description

AP8064 is a CMOS device. Floating level on input signals causes unstable device operation and abnormal current consumption. Pull-up or Pull-down resistors should be used appropriately for input or bidirectional pins.

Notes.

- 3. 'TK' is drive pin for touch key function.
- 4. 'CHARGE-LED' is a function for indicating the charge status of battery even in power down mode.
- 5. All GPIOs can be used as external interrupt pins.
- 6. For each of the following modules, only one port group can be activated at any given time, e.g., either USB1 or USB2 can be activated, but not both at the same time.

Module	Port Groups
12M_16M clock	12M_16M_OUT0, 12M_16M_OUT1, 12M_16M_OUT2
32K clock	32K_OUT1, 32K_OUT2
IR	IR0, IR1, IR2
I2S	I2S0, I2S1
PCM	PCM0, PCM1
PWC	PWC0, PWC1
SD	SD1, SD2, SD3
SPIM	SPIM1, SPIM2, SPIM3

7. For the following modules, there are two scenarios:

Scenario 1, the signal bus can be activated separately, e.g., use UART_TX or UART_RX only; Scenario 2, only one port can be allocated to the signal bus at any given time, e.g., UART_RX can be allocated to GPIO B[6] or GPIO C[4].

Module	Signal Bus	Ports
UART	UART_TX	GPIO_A[0], GPIO_B[7], GPIO_C[3]
UAKI	UART_RX	GPIO_B[6], GPIO_C[4]
	BUART_TX	GPIO_A[25], GPIO_B[28]
BUART	BUART_RX	GPIO_A[24], GPIO_B[29]
DUAKI	BUART_CTS	GPIO_B[30], GPIO_C[0]

Note:

1. "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. They are not meant to imply that the device should be operated at these limits.

5. Store and Reflow

AP8064 is a moisture sensitive component. The moisture sensitivity classification is Class 3.

It's important that the parts are handled under precaution and a proper manner.

The handling, baking and out-of-pack storage conditions of the moisture sensitive components are described in IPC/JEDC S-STD-033A.

The Technologies recommends utilizing the standard precautions listed below.

- 1. Calculated shelf life in Sealed Bag: 12 months at <40°C and <90% relative humidity(RH)
- 2. Peak Package Body Temperature: 250°C
- 3. After bag is opened, devices that will be subjected to reflow solder of other high temperature process must be:
 - a. Mounted within 168 hours of factory condition $\leq 30^{\circ}$ C / 60% RH
 - b. Stored at <10% RH if not used
- 4. Devices require baking, before mounting if:
 - a. Humidity indicator card is >10% when read at 23±5°C immediately after moisture barrier bag is opened
 - b. Items 3a or 3b is not met
- 5. If baking is required, please refer to J-STD-033 standard for low temperature (40°C) baking requirement in Tape/Reel form.
